FARRELL EQUIPMENT PRODUCT SHOW

The Mono Slab® sales team exhibited and taught an installation class in Eau Claire, WI this month. Look for them on the road as they travel to more shows this season!

WHAT IS EPS?

From the rooftop to the foundation, in businesses, schools and family homes, EPS is an ideal insulation choice with a history of proven performance. Readily available throughout the U.S. and Canada in a range of densities to meet building and energy codes as well as LEED requirements, EPS insulation delivers measurable advantages in energy efficiency, indoor environmental quality and durability. Its expert engineering allows professionals to create the most comfortable environment without compromising design.

EPS BELOW GRADE

Using EPS insulation across below-grade applications is a proven way to help reduce a structure's total energy loss and protect from moisture. EPS' resistance to compressive stresses can align with foundation load requirements, allowing builders to satisfy below-grade insulation requirements without over engineering, leading to material savings.

FPSF BLOG

Northern Built published an educational blog about the science behind Frost Protected Shallow Foundations!
